

Discover Video Internet Streaming Service

Discover Video Streaming Service provides world-class live and on-demand video streaming from Discover Video's Streamsie, Spirit, Rover, and MCE (multi-channel-encoder), and from other popular video sources.

Simplicity

The Arcus service is ultra simple, especially when compared with other professional services. You simply enter an account code, username, and password and your DV encoder is automatically set up and ready to go. You don't have to enter separate server addresses, ports, username, passwords, remote directory, and so on for each of the provided services -- vastly improving simplicity and eliminating the most common setup errors.

High Quality Formats

The service supports live H.264/Flash and H.264/Flash VoD, and both streaming and progressive download formats..

Any Screen Delivery

ARCUS Streaming service delivers your live or VoD to Windows and MAC desktops and to iPhone, iPad, Android and Blackberry mobile devices.

World-Class CDN

Discover Video uses the best Content Delivery Network providers and its own services to provide the reach and scale you need. Whether you are doing a live broadcast to 10 or 10,000 viewers, the service will scale to meet your needs.

Live

Stream in H264/Flash
