

## 360 Lecture Capture and More

Have you ever tried to capture a lecture of a great speaker that moves around the room? Tried the various auto-tracking cameras but it didn't work out? Need to capture the whole room so the viewer has the best experience? Want to wow your audience with both live streaming and automatically scheduled recordings? Want to allow your viewers to focus on what is important to them? Want to combine the live camera video with simultaneous capture of the speaker's desktop?

Discover Video's 360 solution does it all, and it doesn't get any better than this!

### The Camera

Discover Video has partnered with Insta360 to use the amazing pro camera in a classroom or virtually anywhere. Set it up, enter a few configuration values, and you are instantly streaming a live 360 video to the DEVOS system.

The camera is outfitted with six 8K resolution cameras, and the built-in stitching software delivers an amazing 4K live stream to the Discover Video system.

### Control & Schedule

While you can use the camera's mobile or desktop app to control it, the Discover Video system can schedule it to stream and to record at any time. Thanks to the DEVOS system's

advanced IoT control and video scheduler, simply setup the single or recurring times and your 360 video will start and be recorded. The scheduler will also publish your video to the desired content channel so that your Video-on-Demand is available minutes after your event is over.

### Live!

Streaming live video is the hallmark of the Discover Video system. With the 360 video, you can now stream live engaging video of not only lectures, but special events like concerts, board meetings, sporting events, and more. You can control who can see it, record it, and you can also tell the system to push the live stream to YouTube and Facebook if you wish to engage social media.

### Viewing 360

Discover Video's built-in player technology displays your live or on-demand 360 video and the viewer can mouse-move to any view angle they wish. Gone are the days when the subject moves out of the camera range. What's more, the viewer can mouse-wheel zoom or "pinch" in on any portion of the 360 video. It's UHD 4K video after all.

### Multi-View

Your 360 video can be part of the unique Discover Video multi-view player. The Multi-

view player gives you an on-the-fly, user-adjustable layout of up to four synchronized videos. With 360, you can include a desktop (e.g. PowerPoint) stream alongside your 360 camera stream, giving the most immersive, most informative, and most interesting experience possible.

### Video on Demand (VoD)

Upload any video to the system for Video-on-Demand viewing, including 360 videos. But because you can record your live 360 video directly, your VoD can be instantly available. Pure HTML5 makes viewing easy on virtually any computer, phone, or tablet.

### Active Directory

The DEVOS system fully supports your existing Active Directory, but at the same time allows you to add users outside of your domain. Everyone with their own account, making security and add/change/delete a snap.

### It's the bandwidth, stupid

Streaming video requires a lot of bandwidth. When you are alone in your home, you probably are sharing your internet connection with only your family. But when you are in the office, you are sharing the internet connection with hundreds, even thousands of people. 4K and 8K video is at least double the speed of conventional HD video, so your network may need some help. No worries, StreamPump® makes it easy to preserve your network performance by automatically reflecting your live

and on-demand video stream to any viewer on the same network. So you can have hundreds of viewers even when your network capacity can only support one! StreamPump fully supports your 360 video.

### On The Road

The 360 camera can be powered from a (included) rechargeable battery. You can record your 360 video on-the-go, and the video is gyro stabilized giving you an awesome 4K 360 video, and it even captures the video from each of the six camera as a separate video. Record to SD card, or (better) plug in you're your USB 3.0 SSD drive. Then plug the drive into your computer and upload your 360 to DEVOS.

### How To Get The Camera

Order the camera from us for \$3,495 each.

If you are already a Discover Video customer and have a DEVOS, DVExpress, or Arcus system, you need nothing else. The camera will work with your system out of the box.

If you don't have an existing Discover Video system contact us or one of our representatives for a quote.

If you wish to just enjoy the camera without the benefit of a full the live, on-demand, intelligent video system, we can take your credit card order and ship you a camera.
